

Algorithmic Execution with 360T

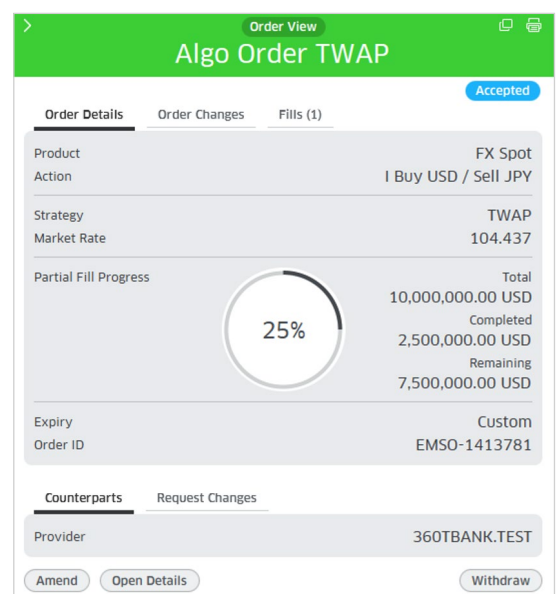

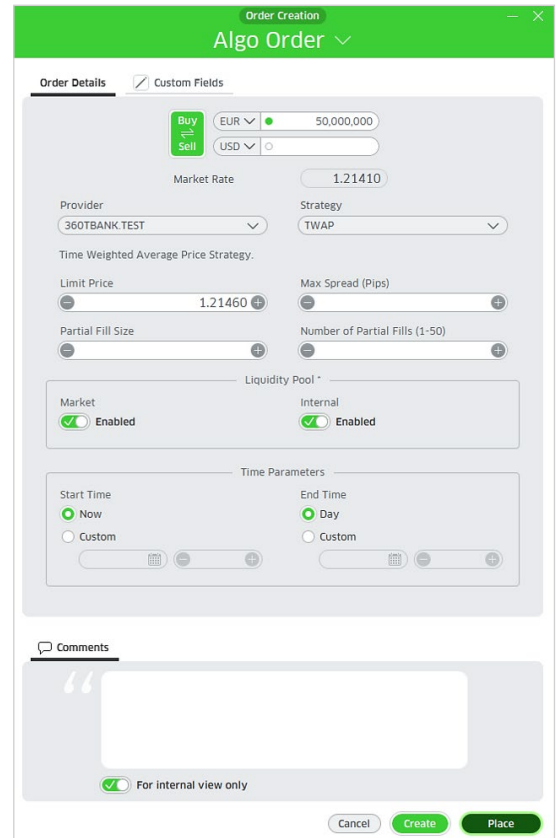

With growing trends of algorithmic execution, 360T has adapted its industry leading product suite to provide greater flexibility and user experience around algorithmic executions. When it comes to algorithmic execution, 360T understands the importance of workflow execution, useability and management of your orders. Consolidating execution to a single GUI, 360T delivers a user-friendly experience around order submission and management, providing users with the ability to submit, modify and react to changing market conditions through a single connectivity point via the 360T front end.

Serving as a central point to tap into sophisticated liquidity provider algo suites, 360T provides connectivity to over 18 algorithmic providers with the ability to execute Spot, Forward and NDF algos all via one central GUI. With access points through 360T Bridge and EMS interfaces, algo strategies offer an additional execution tool seeking to increase transparency, improve execution and drive automation within FX operations.

To learn more about 360T's algorithmic execution capabilities please get in touch with your account manager or our algo specialists:
