# SuperSonic Trader: Instantly Executable Streamed FX Spot Prices from Multiple Sources

SuperSonic Trader (SST) provides access to the Streaming Spot and NDF liquidity of both 360Ts disclosed (360T TEX) business and the Anonymous ECN, 360TGTX. SST can also be used to access FX Futures and Rolling Spot Futures on Eurex, allowing users to access a diverse array of liquidity through both bilateral and facilitated credit.

Smart Order Routing

Leveraging Smart Order Routing, SST helps to consistently facilitate best execution. By optimising for best price, fill ratio, hold times, slippage costs and market impact reduces overall transaction costs when executing Spot FX.

The 360T Smart Order Router offers a unique approach in routing clients to the best liquidity source while simultaneously supplying Market Makers with the critical information required to risk manage their book. Taker clients can choose to execute on a Full Amount basis with one Liquidity Provider (LP), or sweep across many LPs, without the need to toggle settings, while Makers are set up to accommodate both flow styles.

Liquidity Pools

| 360T TEX Disclosed | 360TGTX Anonymous | 360T CLOB (Firm Liquidity) | Eurex Classic FX & Rolling Spot Futures |

Passive Orders

SuperSonic

Aggregation | Smart Order Routing

Private Order Book (Algos & Aggressive Orders)

Distribution

Client Optimized Liquidity Distribution
(Price Tiers And Frequency Per Ccy Pair)

Liquidity Access

SuperSonic Taker GUI | SuperSonic Taker API

Key Points at a Glance

✅ RFS FA
Compare Streaming Spot liquidity with RFS pricing in one GUI and benefit from increased market insight, particularly in less liquid or larger ticket sizes.

▶▶ Fast Orders
Quick order placement to join the top of book or capture mid-price.

👁 Price Improvements
Price improvements are passed onto Market Takers transparently.

Price Configuration
View top of book pricing as a VWAP ladder of configurable amounts alongside depth of quotes or price-level aggregated liquidity.

🕐 Slippage Management Capabilities
360T's slippage management capabilities empower you to control the cost of rejection/re-fill in fast-paced Spot markets by allowing execution within configurable price and time thresholds.

Limit Management
SuperSonic Trader is integrated into 360T's Risk Management Suite, which ensures trader or organisation level limits are conformed to, overall, or against each counterparty.

⚙ Algorithmic Orders
360T's TWAP algorithm locks in average price action over a time horizon, and is suitable for offloading large risk without signaling intention to the market. TCA reports enable you to appropriately measure the implementation of your strategy.

📊 Comprehensive Reporting
Gain access to extensive reporting on order routing and execution performance on liquidity pools.

🔧 Full Customisation
Benefit from a flexible workspace, float currency pairs, and manage positions per user-defined trading session.
