

Algo Trading

360T provides a diverse suite of Algos that support a variety of execution strategies to optimise trading outcomes and meet client needs.

Why 360T Clients use Algos

- > **Anonymity & Reduced Market Impact**
Minimise signalling risk and avoid price movements caused by large trades.
- > **Cost Reduction**
Optimise execution costs by reducing slippage and accessing better liquidity.
- > **Execution Efficiency**
Automate trading to execute orders faster and more accurately than manual methods.
- > **Transparency & Control**
Gain clearer insights into execution performance with real-time analytics and benchmarking.
- > **Liquidity Access & Smart Order Routing**
Tap into multiple liquidity pools, including both bank and non-bank liquidity, for better pricing and execution.
- > **Netted Algos**
Net orders and trade the net-amount through Algo strategies. 360T's EMS manages the allocations accordingly.
- > **Automation & Workflow Optimisation**
Streamline FX operations, reducing manual intervention and operational risks.
- > **Algo Short-Cut**
Create a pre-defined Algo template that minimises user interaction and time to market. Algo orders can be sent to market in one click.
- > **Non-Bank Liquidity & Execution Options**
Access liquidity providers beyond traditional banks like market-leading provider of independent Algos, Quantitative Brokers (QB), for deeper liquidity and increased anonymity.

Versatile Algo Access

Unlock greater flexibility and efficiency through the functionalities and features of the Algos available with 360T, designed to support diverse trading needs, broad market access, and full transparency.

Spot, Forwards &
NDFs

(Click & trade)

Algo Strategies at a Glance

- › **Time / Volume Based (TWAP/VWAP)**
Strategies that intelligently work bids/offers and spread trades over time, aiming to track a time-weighted or volume-weighted benchmark.
- › **Aggressive**
Executes orders quickly, often prioritising speed over price. Aims to capture market liquidity at current prices.
- › **Custom**
Tailored algorithms for specific user-defined criteria or parameters, offering flexibility to suit unique objectives.
- › **Fixing**
Executes orders at a pre-defined price, usually based on a specific time or benchmark rate. Ensures orders match the fixed level.
- › **Iceberg**
Displays a small portion of a large order, revealing the rest progressively. Minimises impact and avoids signalling large trades.
- › **Limit**
Places orders at a set price or better. Ensures the trader only buys or sells when the market hits or exceeds the specified price level.
- › **Liquidity Seeking**
Seeks hidden or fragmented liquidity across venues. Aims to fill large orders discreetly, without affecting price or revealing intent.
- › **Passive**
Executes orders slowly, placing them away from the market price to capitalise on price movements and capture better spreads.

Algo Providers at a Glance

360T offers top-tier bank and leading non-bank Algos, enhancing clients' trading.

Non-Banks

Quantitative Brokers (QB) This partnership allows 360T clients to access QB's FX algos alongside bank-provided ones, executing trades across highly curated disclosed or anonymous liquidity pools to enhance competition and ensure best execution.

Banks

- | | | |
|-------------------|------------------|--------------------|
| › ANZ | › Deutsche Bank | › Northern Trust |
| › Bank of America | › Goldman Sachs | › RBC |
| › Barclays | › HSBC | › Societe Generale |
| › BNP Paribas | › JP Morgan | › Standard Charter |
| › Citi | › Morgan Stanley | › State Street UBS |
| › Commerzbank | › NAB | › UBS |
| › Credit Agricole | › NatWest | |
